Overview

Bill of Materials is easy to operate, and can be easily interfaced with our Financial Management and Inventory Management Systems.
The Bill of Materials System is used for production purposes. It facilitates better planning of production according to the Sale Orders of the company.

Features

Flexible
Bill of Materials System offers unrestricted flexibility by allowing you to customize the system according to your Production Business Processes. You can define multiple transaction definitions that govern how the different sales documents will behave depending on your organizational needs.

Simple to Use
Bill of Materials System incorporates internationally accepted graphical elements, according to the Microsoft Windows standard, delivering a familiar "look and feel". This minimizes training time and allows users familiar with the Microsoft Windows interface to get "up and running" soon after the system is installed. The instant reference information, eliminating the need to refer to print-ed manuals.

Customized Reporting
Reports can be generated as and when required. Flexible report selection criteria allow you to restrict the information to be printed and the way that these will be sorted. Using the preview windows, reports can be viewed on the screen before being sent to the printer. The Crystal Report Writer allows your expert user to design any custom report from the database without programming.

Ad-Hoc Queries
Enter your search criteria in the empty text boxes of a form and press the query button to have the system select all the information matching the criteria entered. Use the criteria selections of the document management forms to query on the document status as well as other criteria available. View the results of the enquiry in a tabular form. Double click on any of the documents listed to navigate to the source entry documents.

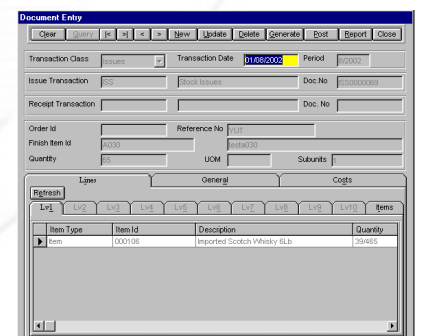

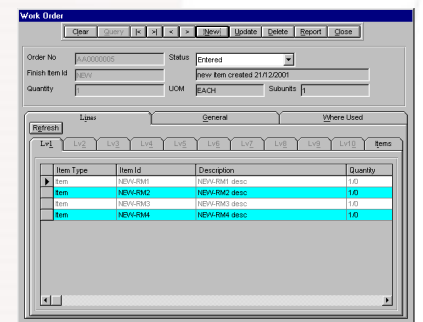

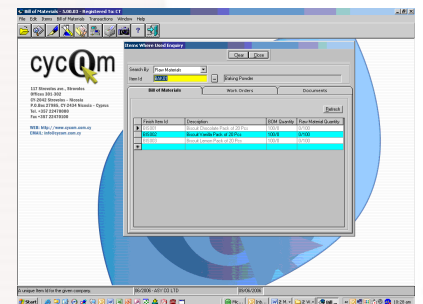

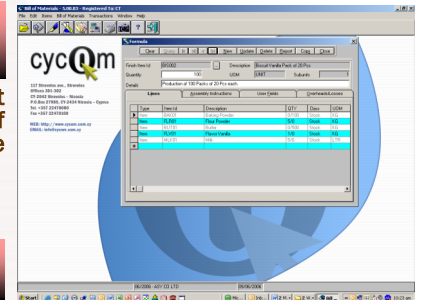

Integrated
Bill of Materials System is fully integrated with the Inventory Management, Financial Management, Purchase Order Processing and the Address Management Systems both in terms of their visual interface as well as their underlying mechanics and database. All related systems are updated concurrently and no special or lengthy procedures need to be executed periodically.

Email Enabled
All reports can be forwarded to any recipient or group connected to the electronic mail system after being previewed on the screen.

Secure Role-Based Access Control
Your system administrator can assign each user to a role-based group. For each group the administrator can assign the functions that are to be accessible to all users of that group. By restricting the functions available to particular users, you can reduce the potential for a security problem.

User Defined Form Sizes and Grid Column Widths

You may adjust the size of your form in order to view more records in a grid and the system will remember the next time you visit the function. Additionally, you may adjust the column widths of a grid of an enquiry form, or even choose the columns to be displayed, and the system will remember your settings the next time you visit the form.

- **Multi Company**
- **Unlimited number of Formulae**
