Cycom Touch Screen P.O.S. System

Easy to Use Interface   Customised Reporting

Email Enabled   Fully Integrated

overview

Cycom Touch Screen POS is specially created to comply with the demands of the Retail and Food Industries.

It is flexible and user friendly. Since it is a System that will used mainly by non-Computerised personnel.

It is directly linked to our Inventory Management System, where the Items are created. It is also linked directly with Our Sales Order Processing System where the Item Sales Prices are created.

It can also be linked to any other third party Accounting Software Systems, if necessary.

* Cycom Business Solutions Ltd provides powerful software solutions for today's demanding and competitive business environment.

Their easy-to-use graphical user interface increases user productivity and enables business workgroups to manage financial information more effectively.

features

With these features, it enables business workgroups to manage retail service information more effectively and increases user productivity to the maximum.

Cycom Touch is Easy-to-use, Fast, and Accurate.

Security features

The Administrator can limit the user to which parts of the program to enter. The user can also be limited to the various functions of the Point-of-Sales System. For Example:- A normal user cannot change the price of an item. Or give more than 20% discount. All of these functions, and many more can be individually changed for each user.

Bonus and Loyalty Card

The Users can use this part of the System to keep track of Customer Loyalty Schemes. The user can open an account for the customer, and every sale to that customer he/she will earn points. These points can be redeemed at any time for various prices, deals or discounts.

Screen Versatility

The user can choose between a variety of different POS screens. Some are better suited to Point of Sales that will be using a Bar Code reader for item input, while others are better suited to item code input. The system even gives you the opportunity to have photographs on the item buttons, thus helping even the most novice users.
The size of the Item buttons are user adjusted. As is the font size, making the screens very flexible to cater for all requirements.

Scales and Weighing Machines

The System works quickly and efficiently with scales. Either by giving the price automatically once the items are placed on the scales and the item chosen by the user, or by scales issuing a barcode ticket for the user to scan.

The System can produce vouchers that can be used as gifts, or as cash later on. Each Voucher has a unique number so that when it is used to pay for a sale, it cannot be used again. There is no set value for the voucher, so it is up to the administrator.

Different Languages

Greek and English, depending on the user. The Screens can be displayed in either Greek or English, depending or the preference of each user.

Key Features

• Sales Returns : can be entered on the same invoice as sales. So the difference is the total on the same bill.

• Standby Facility : an invoice can be frozen while the customer finds the items they forgot. In the mean time the next customer can be served. Once the first customer returns, their invoice can be retrieved and the sale can continue on the same invoice.

• If the user has the authority, both amount or percentage discounts can be given on both total invoice amount, or line by line.

• Various methods of Payments: are accepted. These are separated on reports such as X and Z reports.

standard reports

A rich set of standard Reports is available to help you monitor your business operations.

These can be previewed on the screen or exported to a variety of popular formats like:

Excel, Word, Acrobat etc, or to send the report through electronic mail.
Reports are produced on demand based on user selected criteria, and can be printed for any accounting period.

Point of Sales Reports

Since the Cycom Touch Point-of- Sales System is directly connected to the other Cycom Stock Manage- ment Systems there are literally 100's of reports that can be printed for the various statistics required. However, there are some reports that can be printed directly from the POS System itself. These are:

• Bill / Receipt
• X Report
• Z Report
• Re–print bill
